ExcelTag<sup>™</sup> series

5X PCR Master Dye Mix

TP1200 **200 RXN** 

5X PCR Master Dye Mix 1 ml × 2

Storage

4°C for 6 months -20°C for 24 months

Caution: Avoid Multiple Freeze/Thaw Cycles

## Description

The ExcelTag™ 5X PCR Master Dve Mix is a ready-touse mixture for amplifying targeted DNA fragments. It is designed to serve as ready-to-use master mix for virtually all PCR applications. The mixture contains all components for PCR with the exception of template and primers. This not only saves valuable time in the laboratory, but also reduces the number of pipetting and reagent handling errors. The PCR Master Dve Mix is supplied as a 5X concentrated ready-to-use mix, that is a mixture of recombinant Tag DNA polymerase, reaction buffer, MgCl<sub>2</sub> dNTP. enzyme stabilizer and PCR-friendly loading dye solution containing tracking dve (Bromophenol blue) enabling efficient amplification of template in PCR and allows the user to prepare a PCR reagent loading dve master mix conveniently.

#### **Features**

- 5'→3' DNA polymerase activity
- No detectable 3'→5' exonuclease (proofreading) activity
- Generates PCR products with 3'-dA overhangs
- · High yield PCR
- High reproducibility
- Reduced pipetting errors
- Includes tracking dye for direct loading after PCR

## **Applications**

- Routine PCR
- · Colony PCR
- High throughput PCR
- Amplification of DNA fragments up to 8 kb
- · Generation of PCR products for TA cloning
- DNA labeling

#### Recommended PCR Condition

| Template              | 1 – 150 ng        |
|-----------------------|-------------------|
| Forward primer        | $0.1 - 0.5 \mu M$ |
| Reverse primer        | $0.1 - 0.5 \mu M$ |
| 5X PCR Master Dye Mix | 10 μΙ             |
| ddH₂O                 | to 50 μl          |
| Total volume          | 50 μl             |

# **Recommended PCR Program**

| 94°C     | 2 min     |          |                |
|----------|-----------|----------|----------------|
| 94°C     | 30 sec    | <u>ֿ</u> |                |
| 50~68°C* | 30 sec    | }        | 25 ~ 40 cycles |
| 72°C     | 30 sec/kb | J        |                |
| 72°C     | 1 min     | _        |                |

<sup>\*</sup>Optimal PCR condition varies according to primers' thermodynamic properties.

## **Quality Control**

#### **Functional Testing**

ExcelTaq<sup>™</sup> 5X PCR Master Dye Mix is tested for performance in the polymerase chain reaction (PCR) in a 50 µl standard reaction condition to amplify a 665 bp gene from 10 pg of tested plasmid DNA. The resulting PCR product is visualized as a single band on an ethidium bromide-stained agarose gel.

## **Nuclease Assay**

No contaminating endonuclease or exonuclease activity was detected using pUC19 incubated with ExcelTaq™ 5X PCR Master Dye Mix (1:5 dilution) for 4 hours at 37°C.

# **Residual Nucleotides Assay**

No contaminating residual nucleotides were detected from ExcelTaq $^{\text{TM}}$  5X PCR Master Dye Mix by PCR assay.
