

# YesBlot<sup>m</sup> Western Marker I

Powerful for Western Data Credibility

#### ✓ One tube, ready-to-use

- No need to mix or heat before sample loading

#### ✓ Wide Range

- 10 clear bands from 15 to 200 kDa

#### ✓ Pre-stained bands

 4 pre-stained bands for monitoring protein separation on SDS-PAGE and transferring efficiency on membrane

## ✓ Compatible with your original system

- No additional antibodies or instruments are required.
- Detected by chemiluminescent, fluorescent, chromogenic or other methods

# Nowadays, Western Marker is essential for Western Blots.

**Nature** asks their authors that molecular-weight markers shall be included in gels or blots.

#### A NEW DIMENSION OF DATA DISPLAY

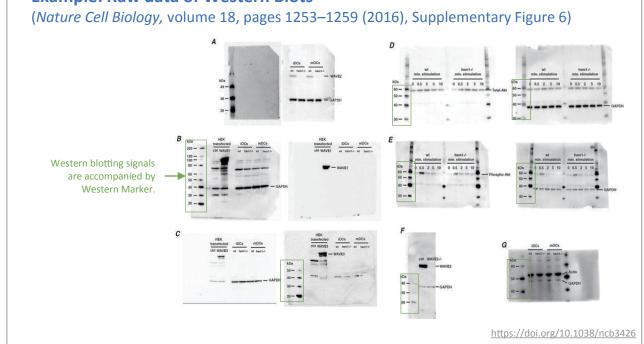

So what constitutes best practice in data display? Here are our recommendations:

- Display conservatively cropped versions of gels in the primary paper.
   A reasonable guide is to retain about five bandwidths of background above and below. Crop only when no essential information is at stake.
- As far as possible, include essential controls and molecular-weight markers; either in the main figure or as Supplementary Information.
- Avoid splicing different gels together. If unavoidable, clearly demark
  the point of splicing and avoid overextending quantitative interpretations across splices.
- Display all of the key data involving cropped gels as a full and unedited version with appropriate labelling in Supplementary Information; please display all panels as a single figure and refer to this data in the relevant figure legends. As a minimum, provide uncropped data at the submission stage to facilitate peer review.

## **Example: Raw data of Western Blots**

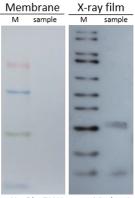

# IgG-binding protein is the best choice for Western Marker

- **Reliable** markers were detected along with targets.
- **Economical** no additional antibodies, reagents or instruments are required.
- **Convenient** no extra steps are required.
- Compatible with any detection system
- Applicable for stripping and re-probing

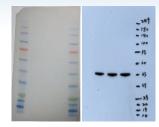

YesBlot™ Western Marker I (SMOBIO)

### Other choices used to label molecular weight for Western blots

#### Indirect labeling on film

- Superimpose X-ray film to membrane.
- Label pre-stained protein marker on the film by marker pen.

ExcelBand™ 3-color High Range Pre-stained Protein Marker (SMOBIO)

#### Artificial labeling on the membrane

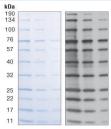

- Label pre-stained protein marker on the membrane by Western pen.
- Detection with chemiluminescent substrate

WesternSure® Pen (LI-COR)

#### Anti-Blue antibody (HRP conjugated)

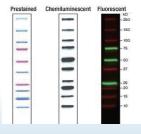

- Incubate the lane with the pre-stained protein marker with anti-blue antibody.
- Detection with chemiluminescent substrate

Anti-Blue (2D2F11) Mouse mAb (HRP) (Cell Signaling)

#### Strep-tagged recombinant proteins

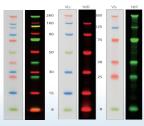

- Work with StrepTactin-HRP or AP during 2<sup>nd</sup> antibody incubation
- Detection depends on using StrepTactin-HRP or AP.

Precision Plus Protein™ WesternC™ Blotting Standards (BIORAD)

#### Fluorescent pre-stained marker

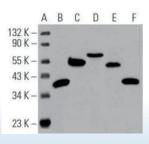

- Use together with appropriate NIR conjugated 2<sup>nd</sup> antibodies.
- Detection with near-infrared detection imaging systems

Chameleon Pre-stained Protein Ladder

#### HRP-tagged recombinant proteins

- Detection with chemiluminescent substrate
- Not recommended to strip and re-probe

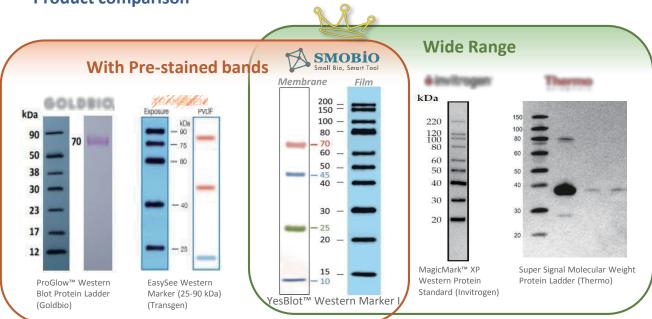

Cruz Marker™ MW Tag-HRP (SANTA CRUZ)

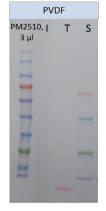

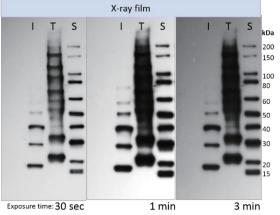

# SMOBIO offers the BEST!

## **Product comparison**

Brand	Name	Range	Official claimed bands	Pre-stained bands on SDS-PAGE or membrane	Actual results
Brand I	MagicMark™ XP Western Protein Standard	20 ~ 220 kDa	9	None	6 bands detected, high MW bands were missing
Brand T	Super Signal Molecular Weight Protein Ladder	20 ~ 150 kDa Narrow!	8	1 (tracking dye)	High MW bands were all smeared.
SMOBIO Small Bio, Smart Tool	YesBlot™ Western Marker I	15 ~ 200 kDa	10	(70, 45, 25, and 10 kDa)	10 sharp and clear bands

## **Ordering information**

Cat. No. Product Description

WM1000 YesBlot™ Western Marker I
